**Syllabus for Semester I, M. Tech - Computer Science & Engineering
(Artificial Intelligence and Machine Learning)**

Course Code: 25CS50TH1175
L: 4 Hrs, T: 0 Hr, P: 0 Hrs, Per Week

Course: Probability and Statistics
Total Credits: 4

Course Pre-requisite : Basics of Probability and Statistics.

Course Objective:

The objective of this course is to expose student to understand the basic importance fundamental principles of probability, including probability distributions, random variables, basic statistical methods used for data analysis, inferential statistics, hypothesis testing, confidence intervals, and regression analysis in computer science and Information technology.

Course Outcomes:

On successful completion of the course, student shall be able to

1. Grasp the meaning of discrete and continuous random variables, probability distribution. Interpret the meaning of probabilities derived from distributions. This involves understanding what the calculated probabilities represent in practical terms and drawing conclusions from the results.
2. To analyze and interpret stochastic models, including calculating probabilities, transition probabilities, and steady-state probabilities within stochastic systems.
3. Grasp the fundamental concepts of curve fitting like regression techniques, model selection, and the use of different types of curves or functions to approximate data.
4. Understand the fundamental concept of hypothesis testing, including the null hypothesis (H_0) and alternative hypothesis (H_1), significance levels, p-values, and the basic logic behind hypothesis testing.
5. To apply MLE to various statistical models, such as linear regression, exponential distribution, etc. They should understand how to formulate likelihood functions and derive estimators for unknown parameters.

Syllabus:

Module 1 (8 hours)

Measure of central tendency, quartile, inter quartile range and outliers, Probability spaces, conditional probability, independence, Discrete random variables, Binomial distribution, Poisson distribution, Normal distribution and their applications.

Module 2: (8 Lectures)

Joint probability function, Introduction to stochastic process, random walk, stationary and auto regressive process, transition probability Matrix, Discrete time Markov chain and its applications in queueing problems.

Module 3: (8 hours)

Curve fitting by the method of least squares- fitting of straight lines, second degree parabolas and more general curves, correlation and regression – Rank correlation, Multiple regression and correlation and its application in analysis of data.

Module 4: (8 Lectures)

Sampling Distributions, Point and Interval Estimations, Testing of Hypothesis for single mean and proportion.

Module 5: (7 Lectures):

Testing of Hypothesis for difference of mean and proportion, Test for ratio of variances - Chi-

square test for goodness of fit and independence of attributes, maximum likelihood estimation.

Text Books:

1. M R. Spiegel , Theory and Problems of probability and statistics :,2nded :,Schaum series
2. S. Ross, A First Course in Probability, 6th Ed., Pearson Education India, 2002.

Reference Books:

1. Maurtis Kaptein, Statistics for data science, An introduction to probability, statistics and Data Analysis, Springer 2022.
2. Jay L Devore, Probability and Statistics for Engineering and sciences, 8th edition, Cenage learning.

Syllabus for Semester I, M. Tech. (Computer Science & Engineering)

Course Code: 25CS50TH1176

Course: Advanced Data Structures

L: 4 Hrs, T: 0 Hr, P: 0 Hr, Per Week

Total Credits: 4

Course Outcomes

On successful completion of the course, students will be able to

1. Implement dynamic list ADTs and planar graphs.
2. Evaluate different static and dynamic hashing techniques.
3. Analyze tree-based structures using red-black trees, B+-trees and splay trees.
4. Apply dynamic programming to a varied set of problems.

Syllabus

Unit-I

Linked Lists: Singly Linked Lists and Operations, Doubly Linked Lists and Operation, Linked Stacks and Linked Queues.

Unit-II

Graphs: Classification, Representation, Breadth First Search, Depth First Search, Connected Components, Spanning Trees, Shortest Paths.

Unit-III

Dictionaries: Definition, Dictionary Abstract Data Type, Implementation of Dictionaries.

Hashing: Open Addressing and Separate Chaining, Collision Resolution, Cuckoo Hashing, Hopscotch Hashing, Extendible Hashing.

Unit-IV

Red Black Trees: Height of a Red Black Tree, Bottom-Up Red Black Tree & Operations: Insertion, Deletion and Searching.

2-3 Trees: Advantage of 2-3 trees over Binary Search Trees, Search and Update Operations on 2-3 Trees.

Unit-V

B+-Trees: Advantage of B+-trees over BSTs, Height of B+-Tree, Search and Update Operations on B+-Trees.

Splay Trees: Splaying, Search and Update Operations on Splay Trees.

Unit-VI

Dynamic Programming: Basic Strategy, Multistage Graphs, All Pairs Shortest Path, Optimal Binary Search Trees, Traveling Salesman Problem, String Editing, Longest Common Subsequence Problem and its variations.

Text Books

1. Thomas Cormen, Charles Leiserson, Ronald Rivest and Clifford Stein, Introduction to Algorithm, Third Edition, PHI, 2009
2. Michael Goodrich and Roberto Tamassia, Algorithm Design and Applications, Wiley Publishers, 2015.

Reference Books

1. Mark Allen Weiss, Data Structures and Algorithm Analysis in C++, Fourth Edition, Pearson Education, 2002.
2. Ellis Horowitz, Sartaj Sahni and Sengunthar Rajasekaran, Computer Algorithms, Universities Press, 2000.

**Syllabus for Semester I, M. Tech - Computer Science & Engineering
(Artificial Intelligence and Machine Learning)**

Course Code: 25CS50PR1176
L: 0 Hrs, T: 0 Hr, P: 2 Hrs, Per Week

Course: Advanced Data Structures Lab
Total Credits: 1

Course Prerequisite:

Basic knowledge of computer programming and common programming concepts.

Course Outcomes:

On successful completion, of course student will able to:

1. Identify different ADTs, their operations and specify their complexities.
2. Apply linear data structures to address practical challenges and analyze their complexity.
3. Analyze non-linear data structures to develop solutions for real-world applications.
4. Implement different dictionaries and hashing methods and analyze their time and space requirements.

Syllabus:

Experiments based on theory Syllabus in C, C++, Java or Python.

Few lab sessions shall be conducted using virtual lab platforms to enhance learning experiences and accessibility.

Text Books

1. Adam Drozdek, Data Structures and Algorithms in C++, Fourth Edition, Cengage Learning, 2013.

5. A. K. Sharma, Data Structures using C, Second Edition, Pearson Education, 2013.
6. Mark Allen Weiss, Data Structures and Algorithm Analysis in C, Third Edition, Pearson Education, 2007.

**Syllabus for Semester I, M. Tech - Computer Science & Engineering
(Artificial Intelligence and Machine Learning)**

Course Code: 25CS50TH1177

L: 4 Hrs, T: 0 Hr, P: 0 Hrs, Per Week

Course: Artificial Intelligence

Total Credits: 4

Course Outcomes :

On successful completion of course student will be able to:

1. Apply uninformed and informed search techniques and represent given problem using state space representation.
2. Utilize different AI techniques to solve fully informed two player games and constraint satisfaction problems.
3. Solve the AI problems by using logic programming.
4. Identify the uncertainty theory-based techniques for solving diverse problems.

Syllabus:

UNIT I: Introduction to Artificial Intelligence

History, applications, task domains, Basics of problem solving, problem characteristics, problem representation (toy problems and real-world problems); Structure of agent, rational agent, specifying task environment, Properties of task environment; measuring problem solving performance.

UNIT II: Searching Techniques

Uninformed Search: Depth, Breadth, Uniform Cost, Depth Limited, Iterative deepening DFS, Bidirectional Search.

Informed Search: Heuristic Based Search, Greedy Best First Search, A* Search; Local Search algorithms: Hill-climbing, Genetic Algorithms.

UNIT III: Adversarial Search

Two player Games, The min-max algorithm, Alpha-Beta pruning. Constraint Satisfaction Problems: Constraint propagation, backtracking search.

UNIT IV: Knowledge Representation

Knowledge representation, Propositional logic, First Order Logic: Syntax and Semantics of FOL, Inference in FOL: Unification Algorithm, Resolution, Forward Chaining, Backward Chaining, Prolog programming, semantic net, frames, script.

UNIT V: Uncertain Knowledge and Reasoning

Probability and Baye's Theorem, Statistical reasoning: Bayesian networks, Bayes optimal classifier, Naïve bayes algorithm, Fuzzy Logic: properties and operations, Expert system. Expert systems: Introduction, basic concepts, structure of expert systems, types of expert systems, examples.

Text Books

1. Stuart Russel and Peter Norvig; Artificial Intelligence: A Modern Approach; Fourth Edition; Pearson Education, 2022.
2. E. Rich, K. Knight, S.B. Nair; Artificial Intelligence ,3rd Edition, Tata McGraw Hill, 2009.
3. G. Luger, Artificial Intelligence: Structures and Strategies for complex problem solving, Sixth Edition, Pearson Education, 2009.

1. Dan W Patterson, Introduction to Artificial Intelligence & Expert System, Pearson Education India; First Edition, 2015.
2. By Patrick D. Smith, David Dindi, Hands-On Artificial Intelligence for Beginners: An introduction to AI concepts, algorithms, and their implementation, First edition, Packt Publishing Ltd, 2018.
3. Denis Rothman; Artificial Intelligence By Example: Develop machine intelligence from scratch using real artificial intelligence use cases; Kindle Edition, Packt Publishing Ltd, 2018.
4. Richard E. Neapolitan, Xia Jiang, Artificial Intelligence with an Introduction to Machine Learning, Chapman and Hall/CRC; 2nd edition, 2018.

**Syllabus for Semester I, M. Tech - Computer Science & Engineering
(Artificial Intelligence and Machine Learning)**

Course Code: 25CS50PR1177

L: 0 Hrs, T: 0 Hr, P: 2 Hrs, Per Week

Course: Artificial Intelligence Lab

Total Credits: 1

Course Prerequisite:

Basic knowledge of the data structure and probability.

Course Outcomes :

On successful completion of course student will be able to:

1. Apply uninformed and informed search techniques and represent given problems using state space representation.
2. Utilize different AI techniques to solve fully informed two player games and constraint satisfaction problems.
3. Solve the AI problems by using logic programming.
4. Identify the uncertainty theory-based techniques for solving diverse problems.

Syllabus:

Experiments based on “Artificial Intelligence” course syllabus.

Text Books

1. Stuart Russel and Peter Norvig; Artificial Intelligence: A Modern Approach; Fourth Edition; Pearson Education, 2022.
2. E. Rich, K. Knight, S.B. Nair; Artificial Intelligence ,3rd Edition, Tata McGraw Hill, 2009.
3. G. Luger, Artificial Intelligence: Structures and Strategies for complex problem solving, Sixth Edition, Pearson Education, 2009.

Reference Books

1. Dan W Patterson, Introduction to Artificial Intelligence & Expert System, Pearson Education India; First Edition, 2015.

3. Denis Rothman; Artificial Intelligence By Example: Develop machine intelligence from scratch using real artificial intelligence use cases; Kindle Edition, Packt Publishing Ltd, 2018.
4. Richard E. Neapolitan, Xia Jiang, Artificial Intelligence with an Introduction to Machine Learning, Chapman and Hall/CRC; 2nd edition, 2018.

**Syllabus for Semester I, M. Tech - Computer Science & Engineering
(Artificial Intelligence and Machine Learning)**

Course Code: 25CS50TH1178

Course: Advanced processors for AI

L: 4 Hrs, T: 0 Hr, P: 0 Hrs, Per Week

Total Credits: 4

Course Outcomes:

At the end of successful completion of the course, students will be able to

1. Gain Knowledge about the architectural features and instructions of ARM Cortex M microcontroller.
2. Comprehend the basic hardware components and Embedded C programming
3. Experiment with sensors, actuators and Interfacing Modules.
4. Deploy Neural Networks and Machine Learning on microcontrollers

Syllabus

UNIT-I: ARM Introduction and Pipeline structures

ARM Design Philosophy & RISC Architecture, Programmer's Model. ARM Cortex M, Cortex M Architecture, ARM Cortex-M Internals & Debugging, Thumb-2 and Instruction Set Architecture, Instruction Examples.

UNIT-II: Embedded C

Embedded System, Programming Embedded system, Factor for selecting the Programming language, Embedded C programming Language.

UNIT-III: Timer, converters and GPIOs

GPIO Configuration, Timers, ADC & DAC Basics, Interfacing IO devices, Interrupts, Protocol configurations

UNIT-IV: Helium Architecture and Instruction Set

Helium Fundamentals, Helium Registers, Instruction Examples, Helium Vector Processing, Helium Instruction Set: Data Processing Instructions, Memory Access Instructions, Helium Branch, Scalar and Other Instructions

UNIT-V: Neural Networks and Machine Learning

Introduction to Neural Networks, Cortex Microcontroller Software Interface Standard (CMSIS)-NN, Tensor Flow Lite for Microcontrollers, Model Conversion, Model Deployment, Converting a Neural Network for Helium, Sample use cases.

Text Books:

1. Novello, Carmine. "Mastering STM32" , Obtenido de, 2017.
2. Norris, Donald. Programming with STM32: Getting Started with the Nucleo Board and C/C++. McGraw Hill Professional, 2018.
3. Jon marsh, Arm Helium Technology, Arm Education Media ,2020.

Reference Books:

1. STM32F10xx User Manual
2. <https://www.arm.com/resources/education/books>

**Syllabus for Semester I, M. Tech - Computer Science & Engineering
(Artificial Intelligence and Machine Learning)**

Course Code: 25CS50PR1179
L: 0Hrs, T: 0 Hrs, P:2 Hrs, Per Week

Course: Advanced Programming Lab-I
Total Credits: 01

Course Outcomes:

On successful completion of the course, students will be able to:

1. Design Python programs using different data and control structures.
2. Use Python Files, Modules and Packages to develop complex python programs.
3. Develop Python program using various libraries for data analytics, data visualization and scientific applications.
4. Implement the Object-Oriented Programming concepts in Python.

Syllabus:

Python Data Structures and its Applications: Lists, Tuples, Sets, Dictionaries, Slicing. Handling Strings in Python, String Operations, List Comprehension.

Basics of Python Programming: Operators, Control structures, Functions, Creating and importing Modules in program.

Dealing with files in Python, Modules and Packages.

Working with Open Source Python based libraries: Scipy, Pandas, Numpy, Matplotlib and Seaborn. Data Pre-Processing and visualization using Python libraries.

Python object oriented features: concepts of classes, methods, objects and inheritance.

Web scrapping: Introduction to Web scrapping and its need in application development to scrape the web with the help of standard libraries like Requests and BeautifulSoup.

EDA: A library for exploratory data analysis. It provides tools for visualizing and summarizing data.

Text Books

1. Python Programming Using Problem Solving Approach: Reema Thareja, Oxford University, Press; First edition.
2. Learning Python: Powerful object oriented programming, Mark Lutz, O'REILLY publications 5th addition.
3. Problem Solving with Algorithms and Data Structures using Python by Brad Miller and David Ranum, 2nd addition.

Reference Books

1. Allen Downey, Jeffrey Elkner, Chris Meyers, Learning with Python, Dreamtech Press

**Syllabus for Semester I, M. Tech - Computer Science & Engineering
(Artificial Intelligence and Machine Learning)**

Course Code: 25CS50PR1180
L: 0 Hrs, T: 0 Hr, P: 2 Hrs, Per Week

Course: Open Source Software Lab – I
Total Credits: 1

Course Prerequisite:

Basic knowledge of computer programming and common programming concepts.

Course Objectives

1. Understand UI/UX basics and its use in software industry.
2. Understand basic use cases of UI/UX.
3. Develop small utilities using UI/UX tools.
4. Develop and integrate UI/UX with basic programs.

Syllabus

HTML5

Creation of headers, paragraphs, links, importing of images, tables, designing of forms, and document structure of HTML, Multimedia based tags- audio, video, iframe, Creating Animations,

Style Sheets

CSS3 - Introduction to Cascading Style Sheets- Features-Core syntax - Style Sheets and HTML Style Rule, Text Properties

Client- Side Programming

Introduction to JavaScript, Syntax, Variables and Data Types, Statements, Operators, Literals, Functions, Objects-Arrays-Built-in Objects, Form Validation, DOM Manipulation, jQuery

Data Visualization

CanvasJS Library,
HighChartsLibrary

Angular JS

Introduction, Features of AngularJS ,Model-View-Controller, Built-In Filters, Using AngularJS Filters,Controllers & Modules, Working with Angular Forms, Model Binding

React JS

React and JSX, React components – class and functional, lifecycle methods, props vs. state, eventhandling, conditional rendering

Course Outcomes

On successful completion of the course, students will be able to:

1. Design stylized static and dynamic web pages.
2. Develop web applications and libraries with efficient DOM manipulation.
3. Use data visualization tools to develop interfaces for use cases
4. Develop single page applications using voice technology, motion design, and animation.

Text Books

1. “HTML and CSS: Design and Build Websites” by Jon Duckett, Wiley & Sons, 2011
2. “JavaScript and jQuery: Interactive Front-End Web Development”, by Jon Duckett, John Wiley & Sons, 2011.
3. UI/UX design for designer and developers: by Nathan Clark

**Syllabus for Semester II, M. Tech - Computer Science & Engineering
(Artificial Intelligence and Machine Learning)**

Course Code: 25CS50TH1281
L: 4 Hrs, T: 0 Hr, P: 0 Hrs, Per Week

Course: Machine Learning
Total Credits: 4

Course Outcomes:

On successful completion of the course, students will be able to:

1. Solve the problems related to the fundamental concepts in machine learning.
2. Analyze the strengths and weaknesses of various machine learning approaches.
3. Apply machine learning algorithms to solve classification, regression and clustering problems.
4. Implement various machine learning models to efficiently solve real-world problems.

Syllabus:

UNIT - I

The concept learning task: General-to-specific ordering of hypotheses, Version spaces, Inductive bias, Decision Tree Learning, Over-fitting, Cross-Validation, and Experimental Evaluation of Learning Algorithms.

UNIT - II

Instance-Based Learning: k-Nearest neighbor algorithm, weighted k-NN algorithm, Radial basis function network (RBFN).

Regression: Linear Regression, Logistic Regression.

UNIT – III

Artificial Neural Networks: Linear threshold units, Perceptron, Multilayer networks and back-propagation, recurrent networks.

UNIT - IV

Probabilistic Machine Learning: Maximum Likelihood Estimation, MAP Bayes Classifiers, Naive Bayes, Bayes optimal classifiers, Minimum description length principle.

Bayesian Networks, Inference in Bayesian Networks, Expectation Maximization (EM) algorithm.

UNIT - V

Unsupervised Learning: K-means Clustering, Hierarchical Clustering. Support Vector Machine, Hidden Markov Models, and Ensemble learning: boosting, bagging, Random Forest.

Text Books

1. Tom Mitchell; Machine Learning- an Artificial Intelligence Approach, Volume-II; Morgan Kaufmann, 1986.
2. Christopher Bishop, Pattern Recognition and machine learning; Springer Verlag, 2006.

Reference Books

1. Soumen Chakrabarti; Mining the Web: Discovering Knowledge from Hypertext Data, Morgan-Kaufmann, 2003.
2. A. K. Jain and R. C. Dubes; Algorithms for Clustering Data; Prentice Hall PTR, 1988.
3. Ethem Alpaydin, Introduction to Machine Learning, PHI.

**Syllabus for Semester II, M. Tech - Computer Science & Engineering
(Artificial Intelligence and Machine Learning)**

Course Code: 25CS50PR1281
L: 0 Hrs, T: 0 Hr, P: 2 Hrs, Per Week

Course: Machine Learning Lab
Total Credits: 1

Course Outcomes:

On successful completion of course student will be able to:

1. Implement fundamental concepts used in machine learning algorithms.
2. Implement python programs for various learning algorithms.
3. Apply appropriate machine learning algorithms to various data sets.
4. Apply machine learning algorithms to solve real world problems.

Syllabus:

Experiments based on **25CS50TH1281 Machine Learning** course syllabus.

Text Books

3. Tom Mitchell; Machine Learning- an Artificial Intelligence Approach, Volume-II; Morgan Kaufmann, 1986.
4. Christopher Bishop, Pattern Recognition and machine learning; Springer Verlag, 2006.

Reference Books

4. Soumen Chakrabarti; Mining the Web: Discovering Knowledge from Hypertext Data, Morgan-Kaufmann, 2003.
5. A. K. Jain and R. C. Dubes; Algorithms for Clustering Data; Prentice Hall PTR, 1988.
6. Ethem Alpaydin, Introduction to Machine Learning, PHI.

**Syllabus for Semester II, M. Tech - Computer Science and Engineering
(Artificial Intelligence and Machine Learning)**

Course Code: 25CS50TH1282
L: 4 Hrs, T: 0 Hr, P: 0 Hrs, Per Week

Course: Research Methodology
Total Credits: 4

Course Outcomes:

On Successful completion of course, students will be able to:

1. Formulate research problems and understand research objectives.
2. Develop a research design and identify appropriate methodologies.
3. Analyze and interpret data using statistical tools.
4. Analyze ethical issues in research and IP regulations.
5. Write a research paper/thesis using standard formats.

Syllabus:

Unit I: Introduction to Research

Definition and objectives of research, Types of research (basic, applied, exploratory, descriptive, etc.), Research process and steps in research, Criteria for good research. **Research Problem Formulation:** Problem identification and formulation, Review of literature and gap analysis, Research questions, hypotheses, and objectives, Feasibility and ethical considerations.

UNIT II: Research Design and Methodology

Types of research design (qualitative, quantitative, mixed-methods), Sampling methods and techniques, Data collection methods (survey, interview, experiment, observation), Reliability and validity.

Unit III: Data Analysis and Interpretation

Descriptive and inferential statistics, Use of software tools (e.g., SPSS, MATLAB, R), Hypothesis testing, correlation, regression, Interpretation of results.

Unit IV: Research Ethics and IPR

Ethical issues in research, Plagiarism, citation styles, Copyrights, patents, trademarks, Filing patents and publication ethics.

Unit V: Technical Writing and Presentation

Structure of thesis/dissertation, writing research papers and reports, Presenting research findings, Conferences, journals, and indexing (SCI, Scopus).

Text Books

1. **C.R. Kothari**, *Research Methodology: Methods and Techniques*, second revised edition , New Age International.
2. **Ranjit Kumar**, *Research Methodology: A Step-by-Step Guide for Beginners*, Sage Publications.
3. **Wayne Goddard and Stuart Melville**, *Research Methodology: An Introduction*.
4. **John -W. Creswell**, *Research Design: Qualitative, Quantitative, and Mixed Methods Approaches*.

Reference Books

1. Introduction to Probability and Statistics by William Mendenhall, Robert J. Beaver, Barbara M. Beaver
2. Probability and Statistics by Morris H. DeGroot and Mark J. Schervish.
3. *Deep Learning* by Ian Goodfellow, Yoshua Bengio, Aaron Courville
4. *Hands-On Machine Learning with Scikit-Learn, Keras, and TensorFlow* by Aurélien Geron.

**Syllabus for Semester II, M. Tech - Computer Science & Engineering
(Artificial Intelligence and Machine Learning)**

Course Code: 25CS50TH1283-1

Course: Natural Language Processing

L: 4 Hrs, T: 0 Hr, P: 0 Hr, Per Week

Program Elective – I

Total Credits: 4

Course Outcomes:

On Successful completion of course, students will be able to:

1. Understand core NLP concepts and techniques.
2. Apply various POS tagging approaches and parsing techniques to analyze sentence structure and utilize probabilistic models for syntactic analysis.
3. Analyze various semantic and pragmatic analysis techniques and discourse phenomena to enhance text representation and understanding.
4. Implement N-Gram language models and Transformer-based models for effective language modeling and text generation.
5. Design and develop innovative NLP solutions to address real-world challenges across industries like finance, healthcare, e-commerce, education, and research.

Syllabus:

UNIT I

Introduction to NLP, Definition and Scope, A Brief History, Importance, Challenges, Tasks, Significance, NLP Pipeline and Applications, Morphological Analysis and Generation using Finite State Automata, Finite State Transducer, Hidden Markov model, Viterbi Algorithm, Applications of Tagging.

UNIT II

Lexical Analysis, Part-of-Speech (POS) Tagging, Approaches for POS Tagging, Rule-Based, Stochastic, Hybrid Approach, Taggers Evaluations, Tokenization with NLTK.

Syntax and Parsing, Types of Constituents in Sentences, Context-Free Grammar (CFG), CFG Parsing, Top-Down Parser, Bottom-Up Parser, Shallow Parsing and Chunking, Thematic Roles, Conditional Random Fields, Maximum Likelihood Estimation, Lexical and Probabilistic Parsing, Probabilistic Context Free Grammars, The Probability of a String, Inside-Outside Algorithm, CKY Parsing.

UNIT III

Semantic Analysis, Lexical Vs Compositional Semantic Analysis, Word Senses and Relations, Types of Lexical Semantics, Word Sense Disambiguation, WordNet and Online Thesauri, Word Similarity and Thesaurus Methods, Text Representation, Word Embedding, TF-IDF, Bag of Words, Word2Vec, *Skip-gram* and Continuous Bag of Words, FastText, Glove, BERT, Other Word Embedding Techniques. Pragmatic Analysis and Discourse, Discourse Phenomena, Coherence and Coreference, Importance of Coreference Relations, Discourse Segmentation, Algorithms for Coreference Resolution.

UNIT IV

N-Gram Language Model, Language Modeling and Chain Rule, Markov Chain in N-Gram Model, Shannon's Method in N-Gram Model, Language Model Evaluation, Entropy, Perplexity, Smoothing Techniques,

Extrinsic Evaluation Scheme, Zero Counts Problems, Smoothing Techniques, Laplace (Add-One) Smoothing, Add-k Smoothing, Backoff and Interpolation Smoothing, Good Turing Smoothing, The Transformer, Large Language Models, Masked Language Models, ROUGE, BLEU.

UNIT V

Major NLP Applications, Information Retrieval Systems, Social Network Analysis, Sentiment Analysis, Information Extraction, Named Entity Recognition, Text Classification, Text Summarization Systems, Machine Translation, Word Alignment, Content Recommendation System, Next-Word Prediction, Answering Questions with RAG, Chatbots and Dialogue Systems, Automatic Speech Recognition and Text-to-Speech, Language Detection, Applications in Finance, E-Commerce, Travel and Hospitality, Marketing, Insurance, Healthcare, Law, Supply Chain, Telecommunication, Education and Research.

**Syllabus for Semester II, M. Tech - Computer Science & Engineering
(Artificial Intelligence and Machine Learning)**

Course Code: 25CS50TH1283-2
L: 4 Hrs, T: 0 Hr, P: 0 Hrs, Per Week

Course: Data Mining and Knowledge Discovery
Total Credits: 4

Course Objectives:

To learn the basics of Data Mining, to describe and demonstrate basic data mining algorithms, methods and tools, use of Data Mining as a business intelligence tool for building competitive advantage through proactive analysis, predictive modelling, identifying new trends and behaviours.

Unit 1: Data Mining: Introduction, Importance of Data Mining, Kinds of Data and Patterns to be Mined, Technologies used in Data Mining, Data Mining Applications, Major issues in Data Mining.

Data Preprocessing: Data Preprocessing: An overview, Data Cleaning, Data Integration, Data Reduction, Data Transformation and Data Discretization.

Unit 2: Mining Frequent Patterns, associations and Correlations: Basic Concepts, Frequent Itemset Mining Methods, Pattern Evaluation Methods.

Advanced Pattern Mining: Pattern Mining in Multilevel and Multidimensional Space, Constraint-Based Frequent Pattern Mining.

Introduction: Mining High-Dimensional Data and Colossal Patterns, Mining Compressed Patterns, Pattern Exploration and Application

Unit 3: Classification: Basic Concepts, Decision Tree Induction, Rule Based Classification, Model Evaluation & Selection, Techniques to Improve Classification Accuracy.

Introduction: Bayesian Belief Networks, Support Vector Machines, Classification using Frequent Patterns, Lazy Learners, Other Classification Methods.

Unit 4: Cluster Analysis: Cluster Analysis basic concepts, **Partitioning Methods:** k-Means and k-Medoids, **Hierarchical Methods:** BIRCH, CHAMELEON, Probabilistic Hierarchical Clustering, **Density-Based Methods:** DBSCAN, OPTICS, DENCLUE, **Grid-Based Methods:** STING, CLIQUE, Evaluation of Clustering.

Unit 5: Data Mining Trends and Research Frontiers: Mining Complex Data Types, Other Methodologies of Data Mining, Data Mining Applications, Data Mining and Society, Data Mining Trends.

Course Outcomes:

On the successful completion of the subject students will be able to:

1. Conceptualize need and utility of Data Mining.
2. Familiarize with the concepts of various types of data used in Data Mining.
3. Discover interesting patterns from large amounts of data to analyze and extract patterns to solve problems, make predictions of outcomes.
4. Conceptualize latest technologies & techniques in Data Mining.

Text Books:

1. Data Mining- Concepts and Techniques: Jiawei Han, Micheline Kamber Morgan Kaufmann Publishers, Third Edition.
2. Mining of Massive Datasets: Anand Rajaraman, Jeff Ullman, Jure Leskovec.

Reference Books:

1. Advances In Knowledge Discovery And Data Mining,: Usama M.Fayyad, Gregory Piatetsky Shapiro, Padhraí Smyth And Ramasamy Uthurusamy, The M.I.T Press, 1996.
2. The Data Warehouse Life Cycle Toolkit

**Syllabus for Semester II, M. Tech - Computer Science & Engineering
(Artificial Intelligence and Machine Learning)**

Course Code: 25CS50TH1283-3
L: 4 Hrs, T: 0 Hrs, P: 0 Hrs, 4 Per Week

Course: IoT and Cloud Analytics
Total Credits: 4

Course Objective:

The objective of this course is to impart necessary and practical knowledge of components of Cloud computing and develop skills required to design real-life cloud-based projects by:

1. Learning basic of IoT and cloud systems.
2. Understand IoT systems using various hardware platforms.
3. Utilize cloud platforms for data ingestion, processing, and storage
4. Understanding cloud security for various IOT applications

Syllabus:

Unit I: Introduction to IoT

Definition and Concept of IoT, Evolution of IoT and Key Enabler, IoT Ecosystem and Stakeholder, IoT Architecture and Layers, Applications of IoT in Various Domains (Healthcare, Industry 4.0, Smart Cities, etc.)

Unit II: IoT Hardware and Devices

Introduction to IoT Development Boards: Arduino UNO, ESP32, Raspberry Pi, Node MCU, Sensors and Actuators for IoT Systems, Interfacing Sensors with Microcontrollers, Power Management in IoT Devices, Real-Time Communication and Data Transfer.

Unit III: Introduction to Cloud Computing

Fundamentals of Cloud Computing, Cloud Service Models: IaaS, PaaS, SaaS, Cloud Deployment Models: Public, Private, Hybrid, and Community, Benefits and Challenges of Cloud Analytics, Key Cloud Providers: AWS, Azure, Google Cloud, IBM Cloud

Unit IV: Virtualization and Load Balancing

Issues with virtualization, virtualization technologies and architectures, Internals of virtual machine monitors/hypervisors, introduction to Various Hypervisors, virtualization of data centers, Load Balancing, various load balancing techniques.

Unit V: Cloud Security for Analytics

Security: Vulnerability Issues and Security Threats, Application-level Security, Data level Security, and Virtual Machine level Security, Infrastructure Security, and Multi-tenancy Issues, Cloud Security Tools (AWS CloudTrail, Azure Security Center).

Unit VI: Cloud Analytics and IOT Applications

Case Studies: Health care Analytics and Predictive Modelling Financial Data Analysis and Fraud Detection
E-commerce Analytics for Customer Insights Smart City Solutions with Cloud Data Analytics Industrial Data Analytics and Predictive Maintenance

Course Outcomes

On successful completion of the course, the student will be able to:

1. Understanding of IoT concepts, architecture, and its hardware devices
2. Articulate the concepts of cloud computing, virtualization and load balancing.
3. Analyse and apply cloud security measures to ensure data protection and infrastructure security.
4. Apply cloud analytics techniques to real-world IoT applications.

Text Books:

1. Internet of Things, Architecture and Design principles by Raj Kamal, McGraw Hill education (India) Pvt. Ltd. 1st Edition
2. “Cloud Computing Principles and Paradigms”, Rajkumar Buyya, James Broberg, Andrzej Goscinski, Wiley Publishers.2011.

Reference Books:

1. Learning of Internet of Things by Peter Waher, Packt Publishing, 1st Edition.
2. Designing the Internet of Things by Adrian McEwen and Hakim Cassimally, John Wiley and Sons, Ltd., 1st Edition.
3. Barrie Sosinsky, “Cloud Computing Bible” John Wiley & Sons, 2010
4. Tim Mather, Subra Kumaraswamy, and Shahed Latif, “Cloud Security and Privacy An Enterprise Perspective on Risks and Compliance”, O’Reilly 2009

**Syllabus for Semester II, M. Tech - Computer Science & Engineering
(Artificial Intelligence and Machine Learning)**

Course Code: 25CS50TH1283-4
L: 4 Hrs, T: 0 Hr, P: 0 Hrs, Per Week

Course: Business and Web Analytics
Total Credits: 4

Course Outcomes:

On Successful completion of course, students will be able to:

1. Apply the fundamentals of Business analytics to address real-world business challenges, and optimize decision-making.
2. Perform data-driven decision-making using Statistical and Predictive Analytics.
3. Analyze web and digital marketing metrics through web analytics techniques.
4. Utilize web analytics tools to collect and interpret data.

Syllabus:

Unit I: Introduction to Business Analytics- Overview of Business Analytics: Types (Descriptive, Predictive, Prescriptive), quantitative analysis in business, Benefits of Data Analytics, Descriptive statistics - graphical approaches, measures of central tendency, measures of dispersion (Range, Quartiles, Outliers, and Boxplots, Variance and Standard Deviation), Practice with python.

Unit II: Statistical and Predictive Analytics- Probability Distributions: Bernoulli Distribution, Gaussian Distribution, Poisson Distribution. Predictive Modeling Techniques: Decision Trees, Random Forest, Gradient Boosting. Correlation -Coefficient of correlation, Rank correlation, Coefficient of multiple Correlation, multiple regression.

Unit III: Web Analytics and Digital Marketing Analytics- Introduction to Web Analytics- Clickstream Analysis, User Behavior Analysis, Link Analysis - Page Rank, Modified page rank, Search Engine Optimization using page rank. Search Analytics—Internal Search, SEO, and PPC Performing Internal Site Search Analytics, Beginning Search Engine Optimization, Measuring SEO Efforts, Analyzing Pay per Click Effectiveness.

Unit IV: Analytics strategies and Testing- Segmentation, measuring macro and micro conversions, measuring success on non-economic website, User Behaviour Analysis - Analyzing user behaviour through pageviews, sessions, and bounce rates, Heatmaps and session recordings for user interaction analysis, Identifying user engagement patterns, Advanced Web Analytics, Multichannel attribution and marketing ROI. Testing- A/B testing, Multivariate testing, Search and keyword analysis

Unit V: Web Metrics and web analytics tools- Setting up and configuring web analytics accounts, implementing tracking codes and goals, Web Traffic Analytics, Analysing website traffic sources (organic, direct, referral, paid), Web Metrics- Visits and visitors, Time on page, time on site, Bounce Rate, exit rate, conversion rate, Strategic elements related to web metric – diagnosing root cause, leveraging customer reports, leveraging customer reports, macro view of site's performance.

Sample Tools: Google Analytics, Adobe Analytics, MyMetrix, PlanMetrix, AdMetrix

Text Books

1. Business Analytics: The Science of Data-Driven Decision Making by U. Dinesh Kumar

2. Introduction to Probability & Statistics by William Mendenhall, Robert J. Beaver, Barbara M. Beaver
3. Web Analytics 2.0: The Art of Online Accountability and Science of Customer Centricity, by Avinash Kaushik: A comprehensive guide to web analytics concepts and practices, Wiley Publishing, Ind. 1st ed.
4. Clifton B., Advanced web metrics with google Analytics, Wiley Publishing, Ind. 2nd ed.

Reference Books

1. Web Analytics: An Hour a Day by Avinash Kaushik ,2007, Publisher(s): Sybex, ISBN: 9780470130650
2. Actionable Web Analytics: Using Data To Make Smart Business Decisions by Jason Burby and Shane Atchison,2007, Publisher(s): Sybex
3. Probability and Statistics by Morris H. DeGroot and Mark J. Schervish.
4. Data Science for Business, by Foster Provost, Tom Fawcett

**Syllabus for Semester II, M. Tech - Computer Science & Engineering
(Artificial Intelligence and Machine Learning)**

Course Code: 25CS50TH1284-3
L: 4 Hrs, T: 0 Hr, P: 0 Hrs, Per Week

Course: Optimization Techniques in Artificial Intelligence
Total Credits: 4

Course Outcomes:

On successful completion of the course, students will be able to:

1. Understand the basics of optimization and natural computing.
2. Apply genetic algorithm for optimization problem.
3. Solve optimization problem using Particle Swarm Optimization and Ant Colony Optimization algorithm.
4. Demonstrate the concepts of Fuzzy logic and Artificial Neural Network.

Syllabus:

Unit - I

Introduction: Optimization problem definition, fundamental concepts of search and optimization, Classification of Optimization Problem, Constraints, Feasible Region, Natural computing, Classification of Natural Computing and Evolutionary computing.

Unit - II

Genetic Algorithm: Basic Genetic Algorithm, Fitness function, Evaluation, Selection, Crossover and Mutation, Chromosome Encoding, Roulette wheel selection, genotype and phenotype. Optimization problem solving using Genetic Algorithm.

Unit - III

Fuzzy Set and Fuzzy Logic : Crisp sets and fuzzy sets, Fuzzy set and Operations on fuzzy sets, Fuzzy relations, Uncertainty and Fuzzy, Alpha Cuts, Linguistic variables, Fuzzy logic, Fuzzy Languages, Approximate Reasoning, Expert systems, Uncertainty modeling in expert system, Fuzzy control, Fuzzy clustering. Methods of Defuzzification, Fuzzy Logic based Optimization.

Unit - IV

Swarm Intelligence: Collective Behavior and Swarm Intelligence, Social Insects, Particle Swarm Optimization (PSO) Algorithm, Optimization using PSO. Ant Colony Optimization concepts, Artificial Pheromone, Ant model to solve the traveling salesman problem.

Unit - V

Artificial Neural Network: Artificial Neuron, Activation function, Supervised and Unsupervised Learning methods, Single layer and Multilayer Perceptron, Gradient Descent and Stochastic Gradient Descent (SGD), ADAM.

Text Books and Reference Books

1. Leandro Nunes De Castro, Fernando Jose Von Zuben, "Recent Developments in Biologically Inspired Computing", Idea Group Publishing, 2005.
2. Klir and Yuan, "Fuzzy sets and Fuzzy logic – Theory and Applications", Prentice Hall of India(2000).
3. Jacek M. Zurada, "Introduction to Artificial Neural System", West Publishing Company.
4. S. Rajasekaran, G.A. VijayaLakshmi Pai, "Neural Network, Fuzzy Logic and Genetic Algorithm Synthesis and Applications", PHI publication.

**Syllabus for Semester II, M. Tech - Computer Science & Engineering
(Artificial Intelligence and Machine Learning)**

Course Code: 25CS50TH1284-4

Course: Social Network Analysis

L: 4 Hrs, T: 1 Hr, P: 0 Hr, Per Week

Total Credits: 04

Course Outcomes:

On completion of the course the student will be able to

1. Analyze network data and complex graphs structures.
2. Apply the basics of social network analysis at various levels.
3. Model various interactions between individuals and actors.
4. Preprocess network data for meaningful insights into the OSNs.

SYLLABUS

UNIT – I: Networks and Society

Network preliminaries; Social Networks: Introduction and Applications; Overview of Social Network Analysis; Social Media Content and Levels of Network Analysis.

Networks and Graphs: Types of Networks; Representation of Networks; Network Properties.

UNIT – II: Network Measures

Node Centrality: Degree, Closeness, Betweenness, Edge Betweenness, Katz, Eigen Vector Centrality; Edge and Flow Betweenness; PageRank; Hub and Authority.

Associativity, Transitivity and Reciprocity; Similarity: Structural and Regular Equivalence; Degeneracy: k-Core, Coreness, Core Periphery.

UNIT – III: Network Growth Models

Properties of Real World Networks: Small World Property, Scale Free Property; Random Network Model; Ring Lattice Network Model; Preferential Attachment Model; Price's Model; Six Degrees of Separation.

UNIT – IV: Link Analysis and Network Cohesion

Applications of Link Analysis; Signed Networks: Triadic Balance, Balance and Status Theory; Strong and Weak Ties; Link Analysis and PageRank.

Network Cohesion: Density, Homophily; Bridges, Krackhardt's Graph Theoretical Dimensions of Hierarchy, Positions and Roles.

UNIT – V: Link Predictions and Community Detection

Application of Link Prediction; Link Prediction Methods and Metrics; Evaluating Link Prediction Methods; Heuristic Models; Probabilistic Models.

Types of Communities; Community Detection Methods: Disjoint Community Detection, Overlapping Community Detection, Local Community Detection; Community Detection versus Community Search; Community Evaluation.

UNIT – VI: Ego Networks and Information Diffusion

Ego Network – Overview and Characteristics; Ego Network Measures: Structural Holes, Density, Brokerage.

Information Diffusion Overview; Explicit Networks: Herd Behavior, Information Cascades; Implicit Networks: Epidemical Models, Diffusion of Innovation.

Text Books:

1. Tanmoy Chakraborty; Social Network Analysis; First Edition; Wiley India; 2021.
2. Niyati Aggarwal and Adarsh Anand; Social Networks: Modeling and Analysis; CRC Press; 2022.

References:

1. David Easley and Jon Kleinberg; Networks, Crowds, and Markets: Reasoning about a Highly Connected World; Cambridge University Press; 2001.
2. Stanley Wasserman and Katherine Faust; Social Network Analysis: Methods and Applications; Cambridge University Press; 1994.
3. John Scott; Social Network Analysis; Fourth Edition; Sage Publication; 2017.
4. Mohd. Gouse Galety, et. al.; Social Network Analysis: Theory and Applications; Wiley Global; 2022.

**Syllabus for Semester II, M. TECH.
(Computer Science and Engineering - AIML)**

Course Code: 25CS50PR1285

Course: Advanced Programming Lab – II

L: 0 Hrs, T: 0 Hrs, P: 2 Hrs, Per Weeks Total Credits: 01

Course Objectives:

1. The objective of this course is to develop the ability of students to design android applications.
2. Effectively use files and database to store the data.
3. Use location-based services to develop navigation-based applications.

Syllabus:

- Layout Manager: Linear, Relative, Table, Frame, Constraint Layout
- UI Widgets: Basic Views, Picker Views, List Views
- Activity, Intent: Implicit and Explicit
- Android Notification and Dialog, SMS and Broadcast Receiver
- Data Storage: Shared Preference, Internal Storage and External Storage
- SQLite and NoSQL
- Services and Location Based Services

Course Outcomes:

On successful completion of the course, students will be able to:

1. Design basic android applications using UI resources: Activity and View group
2. Develop android applications to enhance user interactivity by using toast, notification, dialogs etc.
3. Apply android persistence with shared preferences and files, store and retrieve data with databases and enhance interactivity with services.

Text Books

1. Beginning Android Programming with Android Studio, 4Ed by J. F. DiMarzio, Wrox publication.
2. Professional Android 4 Application Programming by Reto Meier, Wiley Publication

Reference Books

1. Android Programming for Beginners - Second Edition by John Horton, Packt Publishing Pvt. Ltd.

Syllabus for Semester II, M. Tech - Computer Science & Engineering (Artificial Intelligence and Machine Learning)

Course Code: 25CS50PR1286

Course: Open Source Software Lab – II

L: 0 Hrs, T: 0 Hr, P: 2 Hrs, Per Weeks

Total Credits: 1

Course Prerequisite:

Basic knowledge of computer programming and common programming concepts.

Course Outcomes:

After successful completion of this lab course, the student will be able to:

1. Understand the philosophy and licensing of open-source software and apply this knowledge in research and development.
2. Utilize open-source programming tools for implementing algorithms and conducting experiments, scientific writing.
3. Analyze and visualize research data using open-source data analysis tools.
4. Evaluate open-source alternatives for software commonly used in proprietary research environments.

Syllabus:

Module 1: Introduction to Open Source Ecosystem

- Open source vs proprietary software
- Licenses: GPL, MIT, Apache, Creative Commons
- Finding and contributing to open-source projects

Module 2: Scientific Computing Tools

- Python for research computing (NumPy, SciPy, Pandas)
- R for statistical computing and visualization
- Jupyter Notebooks for research documentation

Module 3: Document Preparation and Publishing

- LaTeX for writing technical papers and theses
- Bibliography management with BibTeX/Zotero
- Open-source reference managers (JabRef, Mendeley)

Module 4: Version Control and Collaboration

- Git and GitHub for version control and collaboration
- Markdown and README files for research projects

Module 5: Data Visualization and Analysis

- Matplotlib, Seaborn, Plotly (Python)
- ggplot2, Shiny (R)
- OpenRefine for data cleaning

Text Books

1. Unix Concepts and Applications by Sumitabha Das, Tata McGraw Hill Education, 2006
2. The official Ubuntu Book, 8 th Edition

9. The Linux Foundation: <http://www.linuxfoundation.org/>

**Syllabus for Semester III, M. Tech - Computer Science & Engineering
(Artificial Intelligence and Machine Learning)**

Course Code: 25CS50TH1388-4

Course: Deep Learning

L: 4 Hrs, T: 0 Hr, P: 0 Hrs, Per Weeks

Total Credits: 4

Course Objectives

1. To introduce basic deep learning algorithms.
2. To understand real-world problems which can be solved by deep learning methods.
3. To identify deep learning techniques suitable for a real-world problem.

Course Syllabus:

Unit I: Basics of Deep Learning

History of Deep Learning, McCulloch Pitts Neuron, Thresholding Logic, Perceptrons, Perceptron Learning Algorithm and Convergence, Multilayer Perceptrons (MLPs), Representation Power of MLPs, Sigmoid Neurons.

UNIT II: Training of Feedforward Neural Networks

Feedforward Neural Networks, Representation Power of Feedforward Neural Networks, Training of Feedforward Neural Networks, Activation Function and Initialization Methods: Sigmoid, Tanh, ReLU, Xavier and He Initialization, Gradient Descent (GD)

UNIT III:

Fine tuning of deep neural networks

Momentum Based GD, Nesterov Accelerated GD, Stochastic GD, AdaGrad, RMSProp, Adam
Regularization: Bias and Variance, Overfitting, Hyperparameters Tuning, L1 and L2 Regularization, Data Augmentation and Early Stopping, Parameter Sharing and Tying.

UNIT IV: Convolutional Neural Network

Operations of Convolutional Neural Networks, 1D convolution network, 2D convolution network, backpropagation of CNN, Self-Supervised Pretraining, AlexNet, VGG, GoogleNet, Residual Network (ResNet), DenseNet, Transfer Learning

UNIT V: Sequence Learning Problems

Introduction to sequence learning problems, Recurrent Neural Networks, Backpropagation through Time (BPTT), Vanishing and Exploding Gradients

Course Outcome:

On successful completion of the course, students will be able to:

1. Apply fully connected deep neural networks to real-world problem-solving scenarios.
2. Evaluate the performance of various deep learning models in terms of optimization, bias-variance trade-off, overfitting, and underfitting.
3. Analyze the role of convolutional and recurrent neural networks in addressing different real-world problems.
4. Create advanced deep learning models by designing variants of CNNs and RNNs tailored to specific applications.

Text Books:

1. Sandro Skansi, Introduction to Deep Learning ,Springer
2. Charu C. Aggarwal. Neural Networks and Deep Learning: A Textbook. Springer. 2019.
3. Ian Goodfellow and Yoshua Bengio and Aaron Courville. Deep Learning. An MIT Press book. 2016.
4. Dr. S Lovelyn Rose, Dr. L Ashok Kumar, Dr.D Karthika Renuka ,Deep Learning using Python, Willey Publication

Reference Books:

1. Bishop, C. ,M., Pattern Recognition and Machine Learning, Springer, 2006.
2. Yegnanarayana, B., Artificial Neural Networks PHI Learning Pvt. Ltd, 2009.
3. A. Ravindran, K. M. Ragsdell , and G. V. Reklaitis, Engineering Optimization: Methods and Applications , John Wiley & Sons, Inc. , 2016.

**Syllabus for Semester III, M. Tech - Computer Science & Engineering
(Artificial Intelligence and Machine Learning)**

Course Code: 25CS50TH1389-1
L: 4 Hrs, T: 0 Hr, P: 0 Hrs, Per Weeks

Course: Computer Vision
Total Credits: 4

Course Objectives

1. To Learn the core principles of computer vision, image formation, transformations, camera geometry, including stereo vision and depth estimation.
2. To gain proficiency in image alignment techniques, feature detection and feature matching for object recognition and tracking.
3. To explore motion analysis, optical flow methods, and object tracking using algorithms such as Lucas-Kanade, Kalman filter, and background subtraction.
4. To utilize classification and clustering techniques for pattern analysis, along with dimensionality reduction methods.

Syllabus

Unit I: Introduction to Computer Vision & Image Formation

Introduction to computer vision, Digital Image Formation and Camera Geometry: Fundamentals of Image Formation, Transformations in 2D: translation, rotation, scaling, shearing; affine and rigid transformations, Transformations in 3D: translation, rotation about X,Y,Z axis, rotation about arbitrary axis, 3D affine, homogeneous coordinates in 2D and 3D, Concept of pinhole camera, camera calibration, Homography, Stereo Geometry, Binocular Stereopsis: Camera and Epipolar Geometry, Depth estimation.

Unit II: Image Alignment & Feature Detection

Image Alignment: Physically and digitally corresponding points, Feature detection and description: Line detectors (Hough Transform), Corners - Harris and Hessian Affine, SIFT, SURF, HOG, Feature matching and model fitting, RANSAC, Control point based image alignment using least squares - derivation for pseudo-inverse, Applications of image alignment.

Unit III: Motion Analysis & Object Tracking

Motion and Optical Flow: Motion Analysis: Background Subtraction and Modeling, Horn and Shunck method, Lucas-Kanade algorithm, Feature Point Tracking, moving object detection and tracking; Kalman filter

Unit IV: Object Detection & Recognition

Adaboost algorithm: binary classification, face detection, Adaboost for Computation of Haar-like features; Image Segmentation; Object recognition and shape representation, Viola Jones algorithm for face detection and Boosting: Features, Integral images, Boosting, cascade; Activity Recognition in videos.

Unit V: Pattern Analysis & Dimensionality Reduction

Pattern Analysis: Clustering: K-Means, K-Medoids, Classification: Supervised, Un-supervised, Semi-supervised; Classifiers: KNN, ANN models.
Dimensionality Reduction: PCA, LDA; Non-parametric methods; deep neural architectures and applications.

Course Outcomes:

On successful completion of the course, students will be able to:

1. Use the fundamental concepts of computer vision to solve different problems.
2. Apply feature detection, image alignment, motion analysis, and object tracking techniques to solve real-world problems.
3. Analyze the different object detection and recognition techniques to determine its effectiveness in different real-world scenarios.
4. Apply machine learning based techniques to perform pattern analysis and dimensionality reduction.
